TC-300 WHEEL CRUSHER

The left and right valve handles must be operated simultaneously to activate the crushing ram. Both hands are required as A SAFETY FEATURE. A hydraulic gauge monitors the system pressure. (See Fig. A)

Fig. B illustrates an operator inserting a light truck tire for crushing. A single crush stroke completes the process quickly and easily. The heavy wire-mesh panel protects the operator during the wheel crushing operation.

Fig. C shows the crushed wheel when removed from the TC-300. The wheel and tire are easily separated for recycling and disposal.

ADVANTAGES OF WHEEL CRUSHING

- Eliminates difficult and costly manual separation of tires from old, rusted wheels.
- Reduces the cost of tire disposal.
- Reduces transport weight, recycling tires only.
- Reclaims valuable scrap steel for recycling re-sale.
