TC-55 TIRE CUTTER

The TC-55 Tire Cutter is one of the most powerful units for its size. With a footprint measuring only 24" by 40" this workhorse will easily handle multiple passenger or light truck size tires (see Fig. A) as well as heavy truck tires (up to 24.5") and Super Singles.

Heavy truck tires can be difficult to lift by one person but the retractable lift-assist system will make lifting even the heaviest tire a one man job. Simply pull out the retractable hook, secure it to bead of the tire and raise the blade. The tire is pulled up to the cutting table (see Fig. B) where it can be easily moved into position by hand. No more lifting those heavy truck tires!

The controls on the TC-55 require two hands to operate ensuring a safe "hands clear" method of operation (see Fig C). The patented shear blade system uses a gripping moveable Shear Blade against the two Stationary Blades (see Fig. D) for a steady "clean" cut. Passenger tires can be quartered with only three cuts while larger tires can be cut into even smaller pieces.

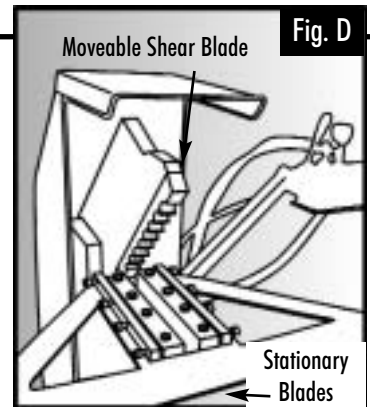

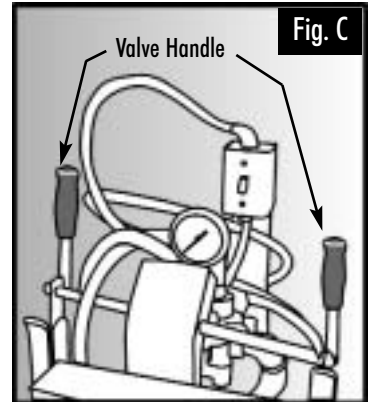

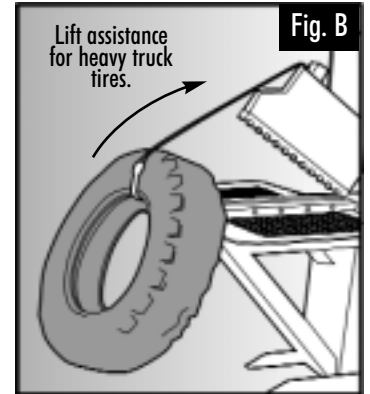

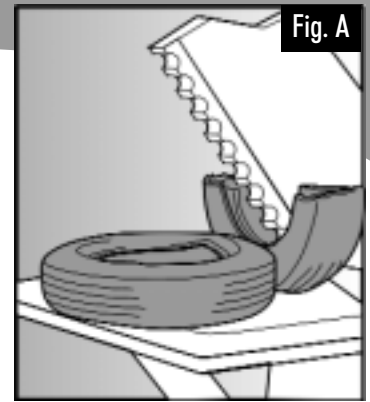

Available with 10 HP 3 phase electric motor or an 18 HP Briggs & Stratton gas engine with electric start.

ADVANTAGES OF BIAS CUTTING SCRAP TIRES

- Tires can be stacked within each other (nested). Reduces tire volume 60%.
- Reduces transportation costs substantially. Transport a more dense and solid load of tires.
- Tires no longer hold water. Eliminates a common breeding ground for mosquitoes.
- Reduces regulatory problems concerning tires.
